

## Tour Travel System

### Tour Travel System

Anyone in the tour travel industry will know that the Internet has been a blessing and a curse. It allows the industry to get up to date access to the latest offers but this flexibility can also be leveraged by the customer, and many are now going online and are booking flights and accommodation bypassing the agent.

The solution to this is to add value, not by competing on price, but by offering a niche service online, by placing new and recommended packages on your site, answering questions and generally by providing information that your customers will find useful.

**"[Tour Travel Online System](#)"** website management system allows you to take full control over your tour travel site. Allow you to add any holiday category such as honeymoons, skiing, sports, etc. Allow you to add any package within these categories. Make the offerings time dependent so that they expire if necessary and tie all these to a booking facility to capture enquiries and provide information about availability and costs.
